Abstract

(EN)

An embodiment of the present invention relates to a method and device for use in transferring a control right of a network device. The method comprises: a multi-domain service controller (MDSC) sending a rights transfer command message to a source physical network controller (S-PNC], the rights transfer command message comprising a first identifier, which is used for indicating a network element (NE) of a control right to be transferred, and a second identifier, which is used for indicating a destination physical network controller [D-PNC], and the rights transfer command message being used to cause the S-PNC to send a rights transfer message carrying the second identifier to the NE according to the first identifier; the MDSC receiving a removal message which is sent by the S-PNC, the removal message being used for indicating that a communication connection between the S-PNC and the NE has been disconnected.

La présente invention concerne, selon un mode de réalisation, un procédé et un dispositif à utiliser pour transférer un droit de commande d'un dispositif réseau. Le procédé comprend les étapes suivantes : un dispositif de commande de service multi-domaine [MDSC] envoie un message de commande de transfert de droits à un dispositif de commande de réseau physique source [S-PNC], le message de commande de transfert de droits comprenant un premier identifiant, qui est utilisé pour indiquer un élément réseau (NE) d'un droit de commande à transférer, et un second identifiant, qui est utilisé pour indiquer un dispositif de commande de réseau physique de destination [D-PNC], et le message de commande de transfert de droits étant utilisé pour amener le S-PNC à envoyer un message de transfert de droits portant le second identifiant au NE selon le premier identifiant ; le MDSC reçoit un message d'élimination qui est envoyé par le S-PNC, le message d'élimination étant utilisé pour indiquer qu'une connexion de communication entre le S-PNC et le NE a été déconnectée.

本发明实施例涉及一种网络设备控制权转移方法与装置。所述方法包括:多域业务协同器MDSC 向源物理网络控制器S-PNC发送移权指令消息,所述移权指令消息包括用于指示待转移控制权的 网元NE的第一标识以及用于指示宿物理网络控制器D-PNC的第二标识,所述移权指令消息用于 使所述S-PNC根据所述第一标识向所述NE发送携带所述第二标识的移权消息;所述MDSC接收所 述S-PNC发送的拆除消息,所述拆除消息用于指示所述S-PNC已与所述NE断开通信连接。
